ORIGINAL SYNTHETIC STUDY · BLANK DEFINITION-BASED FORM

Baseline blood-pressure study
血圧研究・ベースライン

Annotated Case Report Form (CRF) · Study Data Tabulation Model (SDTM)

Experimental custom authoring annotations; not standard JASPEHR or a finalized Fast Healthcare Interoperability Resources (FHIR) extension. All fields are blank regardless of entered answers. No real patient data. * Required field.

Study and participant / 研究・参加者

Study identifier / 研究ID *

study-id · string

Synthetic participant identifier / 架空参加者ID *

participant-id · string

Demographics / 人口統計

Birth date / 生年月日 *

birth-date · date

Input birth-date [birthDate] → used to derive DM.AGE (AGE specialization); not a direct mapping.

Study reference date / 研究基準日 *

reference-date · date

Input reference-date [referenceDate] → used to derive DM.AGE (AGE specialization); not a direct mapping.

Sex as collected / 性別

sex · string

Seated baseline vitals / 座位バイタル

Systolic blood pressure (mmHg) / 収縮期血圧 *

systolic-bp · integer

> Direct → VS.VSORRES (SYSBP specialization; VSTESTCD=SYSBP)

Diastolic blood pressure (mmHg) / 拡張期血圧

diastolic-bp · integer

Pulse (beats/min) / 脈拍

pulse · integer

Measurement notes / 測定メモ

notes · text

Mapping intent and review boundaries

Clinical Data Interchange Standards Consortium (CDISC) Dataset Specialization targets: VS = Vital Signs; DM = Demographics; VSORRES = original result; VSTESTCD = vital signs test short name; SYSBP = systolic blood pressure; AGE = age.

> Derived is this demo's intent. The official AGE specialization declares Collected. This demo does not claim full specialization compliance, execute derivations, or generate an SDTM dataset.

Derived direction

birth-date [birthDate] + reference-date [referenceDate] → DM.AGE (AGE specialization)

Intent: 生年月日と研究基準日から、基準日時点の年齢を年単位で導出する

Optional derivation description (inert text): referenceDateからbirthDateを差し引いた期間を、基準日時点の年齢として年単位で表す。満年齢か小数年齢か、部分日付・閏日・丸め等の扱いは下流仕様で明示的に決定する。

Unresolved downstream decisions: completed years versus fractional age; partial or missing dates; leap-day birthdays; timezone/date boundaries; invalid date order; rounding. No age is calculated in this demonstration.

Raw authoring metadata

The original attributes and unknown metadata are preserved in the downloadable Questionnaire JSON. This display never evaluates annotation content.
